

Tec Rider

Fukushima mon Amour

1. Stage:

Stage size: 10 m X 9 m (not smaller)

Black dance carpet, black box including 4 entrances on the side.

Back side of the stage should be a tight wall, so that the dancer can lean on it (point 4)

The whole back wall will be also used for the projection (point 4)

Snow machine from the ceiling to the middle of the stage.

2. P.A. / monitoring

professional soundsystem , according to the theatre size. Plus monitoring for the stage (from the FOH-place), both loud, CD from FOH

3. Light

see the attached light plan. Can be modified to the stage after agreement with the dancer. 5 side towers are necessary. Light will be directed via FOH

4. Video

Projection will be done on the wall of the back side of the stage (just opposite to the audience) . Black wall or black velvet. If there is no wall in the back put some wooden plates of 2-m X 1m behind the so that the dancer can lean against them.

Projection's size: 12,5 meter X 4,5 meter

Projector : not less than 4000 Ansi-Lumen Desktop-videoprojector with WXGA 1280 X 800.

The projector has to hang upside down under the ceiling. The distance between projector and stage depends on the whole size of the theater and the back of the stage and also on the projector itself. Without any special linse the distance mostly is about 2:1 (about 20-25 meter distance to the back wall).

There must be a manual or automatical shutter at the beamer linse, so that in several scenes it is absolutely dark!!! Blacky DMX or rope construction with a black velvet cloth.

5. Duration of the performance: 60 min.

6. Set up:

set up: at least 8 hours before begin of the performance.

Light focussing: 1,5 hour

After show: 0.5 minutes
